

SIP Trunking Solution

Decrease Monthly Communication Costs

with **Panasonic** and **Verizon**

Panasonic's **KX-TDE100** and **KX-TDE200 IP-PBX** business telephone systems are now certified to work with Verizon's Session Initiation Protocol (SIP) trunking solution – offering businesses of all sizes a more secure path to cost-effective communication.

In addition to benefiting from Panasonic's feature rich, fully capable all-in-one business telephone systems, businesses can now take advantage of Verizon's dynamic bandwidth allocation coupled with anytime anywhere access to a myriad of business communications applications.

Benefits of SIP Trunking:

- Instantly decrease monthly communication expenses
- Reduce or eliminate hardware media gateway purchase and maintenance costs
- Preserve existing capabilities with seamless integration into existing systems
- Enhanced IP based fail-over solutions for faster disaster recovery
- Optimal network performance with a broad range of bandwidth options
- Scalability to increase or reduce capacity as business needs evolve

These benefits accrue as your business grows over time helping to ensure operational efficiency across multiple geographic locations.

Deploying SIP Trunking coupled with a SIP compatible phone system has proven to substantially reduced overall monthly telecommunication expenses. SIP Trunking reduces the cost of communication by converging voice and data onto a single pipe, providing seamless access between the Internet and the worldwide PSTN.
